Notes & Details

The AvaMix BX1GRGV high-volume commercial food blender will have you whipping up large batches of sauces, dips, salsa, and smoothies in no time! This blender boasts a powerful, best in class 3 3/4 hp motor that operates at 26,000 RPM on its highest speed. An impressive motor will make this model the workhorse of your kitchen that can handle the toughest blending jobs. It's the perfect combination of power and control that will handle any blending job, making your life easier in the kitchen and expanding your menu possibilities. This blender is a must-have for any restaurant that does any serious amount of blending. It helps to streamline your blending process and expands your restaurant's menu possibilities.

With variable speed controls, as well as a pulse button that allows you to throttle quick bursts of power when needed, this model gives you complete control over the blending process. The blender utilizes slow start blending in order to break down larger ingredients before getting up to blending speeds. This not only prevents messes but also takes some of the strain off of the motor to help increase its overall lifespan.

With a hefty stainless steel 1 gallon capacity jar, you'll find yourself loading up the blender much less frequently than on traditional, smaller blenders. The jar features two integrated handles for your convenience to provide more stability as you are transporting and pouring from it. Heavy-duty stainless steel blades make the toughest jobs a breeze, so you can relax knowing that this blender can handle any job. Made of durable stainless steel, this blender jar will hold up to the wear-and-tear of a commercial kitchen and provide corrosion resistance to keep your equipment and your products looking great. Plus, this stainless steel jar maintains superior temperature tolerance. This makes it useful for storing contents in a refrigerator or for blending hot soups.

A clasp fitted onto the jar attaches to, and locks down, the lid to avoid overflow and make blending hot liquids safer. The 2-piece lid design allows you to add ingredients while blending without having to remove the lid or stop the motor. Just simply remove the clear center plug and replace it when you are finished adding ingredients. Non-skid feet at the base of the blender help to further eliminate the probability of movement and spillage during operation. This unit requires 120V electrical connection for operation.
